1 Requirements for advanced programming systems for list processing

Daniel G. Bobrow

July 1972 **Communications of the ACM**, Volume 15 Issue 7

Full text available: [pdf\(1.11 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

List processing systems should be designed to facilitate production of large programs to manipulate large complex symbolic data stores. This paper presents an overview of a number of system features which the author feels are important to improve the productivity of programmers working in such domains. A systems view is taken, rather than focusing just on language features, since algorithms must be not only coded in a language form, but debugged, modified, made efficient, and run on data. B ...

Keywords: advanced programming systems, control structures, data structures, design of programming languages, interactive systems, list processing, programming languages, programming primitives, semantics
